

C++ String Objects

CSCI 10 - Santa Clara University - Fall 2016
Michael J. Bannister

Announcements

- Homework 5 is due next Friday
- Challenge problems is included with assignments, but not graded.
- Midterm in one week!
advanced loops, functions, scope,
call-by-reference, simple arrays

Objects

An **object** contains **encapsulated data (local variables)** and **procedures (functions)** grouped together to represent a single entity.

Example 28/29

- A first look at the string object from the string library.

Example 30

- Checking password quality using functions from the cctype library.
