ArrayList & Standard Java Graphics

CS 62 - Spring 2016 Michael Bannister

Lab & Assignment 1

- Strip with 12 squares & 5 silver dollars placed randomly on the board.
- Move silver dollars to fill 5 leftmost squares
 - Coins move only to the left.
 - · No coin may pass another.
 - No square may hold more than one coin.
- · Last person to move wins.
- · Complete description in text.

Read Lab & Assignment Before Lab Wednesday!

Rest of today's lecture is info for lab and assignment!

Random Number Generator

- class Random in java.util package w/ method
 - int nextInt(int n) -- returns random k s.t. $0 \le k < n$
 - See bottom of pg 30 in text.
- Create Random object once, send nextInt many times.
- See LottoHelper example.

Text Input

- · Scanner class
 - Constructor: myScanner = new Scanner(System.in)
 - · can use file instead of System.in
 - new Scanner(new File("filename"))
 - · Read values:
 - myScanner.nextInt() -- returns an int
 - myScanner.nextDouble() -- returns a double
 - myScanner.nextLine() -- returns String -- to end of line
 - · see documentation for more

Back to assertions in Java

- · Won't use Assert class from Bailey.
- · Command to check assertions in standard Java
 - · Two forms
 - assert boolExp
 - · assert boolExp: message
- · Article on when to use assert:
 - http://docs.oracle.com/javase/8/docs/technotes/guides/language/assert.html
 - Short summary -- never use for preconditions of public methods (OK for private) — make explicit checks
 - · Use for postconditions & class invariants

Turning on assert

- Turn on assertions when run program, by adding "-ea" (without quotes) as virtual machine argument in arguments tab in Eclipse when set up runtime configuration.
- If leave it off, then ignores assert statements.
- If on and assertion is false, then will raise an AssertionError exception and will print associated message

Using Assert & Pre/postconditions

- Preconditions of public methods must be enforced.
 - But don't use assert! Why not?
- Preconditions of private methods should also be enforced
 - Can use assert to check preconditions of private method
 - Why?
- Use assert to check postconditions and other class invariants

Arrays & ArrayList

Arrays

- Containers that hold objects
 - C[] myArray = new C[10] // fixed length
 - Different syntax from objects
 - Public instance variable "length" *Ugh!*
- Because of limitations of Java virtual machine, cannot create array of type variable:
 - E.g., new T[5] illegal if T is type variable
 - new C[5] is legal if C is primitive, class, or interface name.

ArrayList

- What happens if need more space in array than originally allocated?
- ArrayList is class that creates objects that dynamically expand as needed.
- · Part of java.util package
- To get access write import java.util.ArrayList or import java.util.*
- Lab: Squares rep by ArrayList of CoinSquares.

Text uses Vector rather than ArrayList ArrayList more efficient if no concurrency

ArrayList Specification

- Class ArrayList<E>
- Important methods:
 - add, get, set, indexOf, isEmpty, remove, size, contains, clear
 - size, isEmpty, get, set take constant time
 - add (to end) is "amortized constant" time
- See javadoc at
 - http://download.oracle.com/javase/8/docs/api/

See PostIt example later!

Java Graphics

For details, see document on course web page associated with lecture

Also see GUI cheat sheet in documentation and handouts section.

Graphics

- Create objects want to draw:
 - Rectangle2D.Double, Line.Double, etc.
 - Constructors take x,y coords and dimensions, but don't actually draw items.
- All drawing takes place in paint method using a "graphics context"
- Triggered implicitly by uncovering window or explicitly by calling repaint method.
 - Adds repaint event to event queue eventually draws it

Overview

- · Graphical User Interfaces (GUI)
 - JFrame (window), JPanel (grouping)
 - JButton, JTextField, JSlider, JChooser, ...
- Events:
 - Generated by mouse actions, button clicks, etc
 - Use MouseListener, MouseMotionListener, ActionListener, etc. to respond
- Graphics
 - Drawing items on the screen today's focus

Graphics context

- · All drawing is done in "paint" method of component
- public void paint(Graphics g)
 - g is a Graphics context provided by system
 - "pen" that does the drawing
 - Programmer calls repaint(), not paint!!
- Need to import classes from java.awt.*, java.awt.geom.*, & javax.swing.*
- See MyGraphicsDemo

General graphic applications

- Create an extension of component (either JPanel, JFrame, or JApplet) and implement paint method in the subclass.
 - · See main method of demo to get window to show
 - At start of paint method cast g to Graphics2D to get access to new methods
- Call repaint() on component every time make a change.
 - Causes OS to schedule call of paint in event queue
 - · Called automatically if window obscured and revealed

Geometric Objects

- Objects from classes Rectangle2D.Double, Line2D.Double, etc. from java.awt.geom
 - · There are also float versions
 - Constructors take params x, y, width, height,
 - · but don't draw object
 - myObj.setFrame(x,y,width,height) can move object
 - g2.draw(myObj) -- gives outline
 - g2.fill(myObj) -- gives filled version
 - g2.drawString("a string",x,y) draws string

MyGraphicsDemo

- · Class extends JFrame, which creates window.
 - Constructor calls super with title of window.
- Main method creates object, sets size, visibility, and enables go-away box in upper left
- Paint method creates and draws objects.

PostItStdApplication

- · More sophisticated
 - JFrame contains two JPanels
 - JFrame uses BorderLayout, so add controls to JPanel in SOUTH, drawing canvas in CENTER of the JFrame
 - Ignore controls for now.
 - See GUI cheat sheet for details
 - DrawingCanvas extends JPanel -- contains paint method
 - Note use of ArrayList to hold PostIts.
