Arrays!

CSCI 10 - Santa Clara University - Fall 2016
Michael J. Bannister

Announcements

- Homework 4: due Friday

Example 22

- Array basics: creating, reading, writing, printing, copying

Example 23

- Common array algorithms: mean, min, max

Example 24

- Functions with array arguments

- Array parameters act like reference parameters!

- There is no way to get the size of an array parameter! So we must have a parameter for the size!

Example 25

- By default there is no bounds checking for arrays.

- There are third party solutions, but they are not yet in wide spread use.
